## Cotton Seed

- Mid Early Variety
- Cotton ginning turnout %43-%45
- Has high yield potential
- Does not discriminate soil types.
- Has very high germination capability.
- Shows high tolerance against fungus diseases (verticillium, fusarium).
- Does not cause product loss during rain and storm during harvest.
- Due to its plant structure, it is the most suitable variety for machine harvesting.

**HIGH QUALITY**

**HIGH YIELD**

**EARLINESS**

SCI (Yarn Producibility Index)	MIC (Fiber Fineness)	Fiber Length	STR (Strength)
150 - 160	4,6 - 4,8	33 - 32 mm	33 - 35 g / tex

It is an in demand variety in textile sector according to the aforementioned HVI data.

\* Data may vary according to cultivation, land and climate conditions.
